The Performance Trials reported in this book are coordinated by Dr. D. E. Falk, Department of Plant Agriculture, OAC, University of Guelph under the mandate of the OMAF Cereal Project. Darius Summers and Zorka Szlavnics conduct the data analysis, prepare and distribute the Progress Reports which are the basis for information in OMAF Field Crop Fact Sheet.

## INTRODUCTION

The Performance Trials of spring barley, oats, spring wheat and winter wheat are conducted by the Ontario Cereal Crop Committee in cooperation with the members of the Ontario Soil and Crop Improvement Association, Commercial Plant Breeders Association of the CSTA, CAT Colleges and Agriculture Canada. Certified seed of registered cultivars was generously provided by Advantage Seed Growers and Processors, Agriculture and Agri-Food Canada, Belcan AgroCentre, Belterre Seeds, Bourgon Seeds, Bramhill Seeds, C & M Seeds, Co-opérative Fédérée de Quebec, Cribit Seeds, Hyland Seeds, Pioneer Hybrid International, Pro Seeds, SeCan, Semico, and the University of Guelph.

## SPRING CEREALS

Spring cereal trials are not conducted in Area I because of the low acreage and the general low performance of spring cereals relative to other crops grown in the Area. Areas II and IV have been combined into a single Area, Area III remains separate, and Areas V and VI are combined into one unit. This gives three major areas for spring cereals, Southwestern Ontario, Eastern Ontario, and Northern Ontario. Each is a major climatic zone with a significant acreage of spring cereals.

**Spring Barley.** Mildew infestation was significant in 2003 causing damage to the crop. Yields were below average in the SW, somewhat above average in the East and near normal in the North, depending on the amount of moisture and the severity of thunderstorms different sites experienced.

**Oats.** Oats were generally less affected by the wet conditions in the SW than barley. Some areas had moderate crown rust; with Areas II and IV reporting some septoria. Yields of most varieties were generally average to above average.

**Spring Wheat.** Spring wheat growth was generally delayed due to the wet, cold spring conditions and the cool summer. Overall, yields of spring wheat were average or above in the SW and East and above average in the North. Fusarium head blight incidence was significant on the spring wheat crop in some areas with a significant amount of fusarium damaged kernels in the southwest.

**Spring Durum Wheat.** There are no durum wheats tested in the Ontario Performance Trial, however, results from the Western Durum Registration Trial grown at Elora are reported.

## WINTER CEREALS

**Winter Barley.** Most winter barley came through the winter in good condition. Mildew was present early, and caused some yield losses. Lodging was a problem in many areas but yields were generally good, with harvest earlier than normal.

**Fall Wheat.** Fall planting conditions were good but cold temperatures in October delayed growth resulting in above average winter kill in Areas II and IV. The cold, wet spring and cooler summer temperatures delayed flowering and anthesis. Some stripe rust showed up and isolated areas had dwarf bunt, however, no appreciable damage on the crop resulted. Septoria was noted early resulting in yield losses on susceptible varieties. Fusarium levels were not a significant problem as infestation was generally at low levels in the SW. Fusarium developed to a greater extent than expected in the spike because of the wet weather following flowering,.

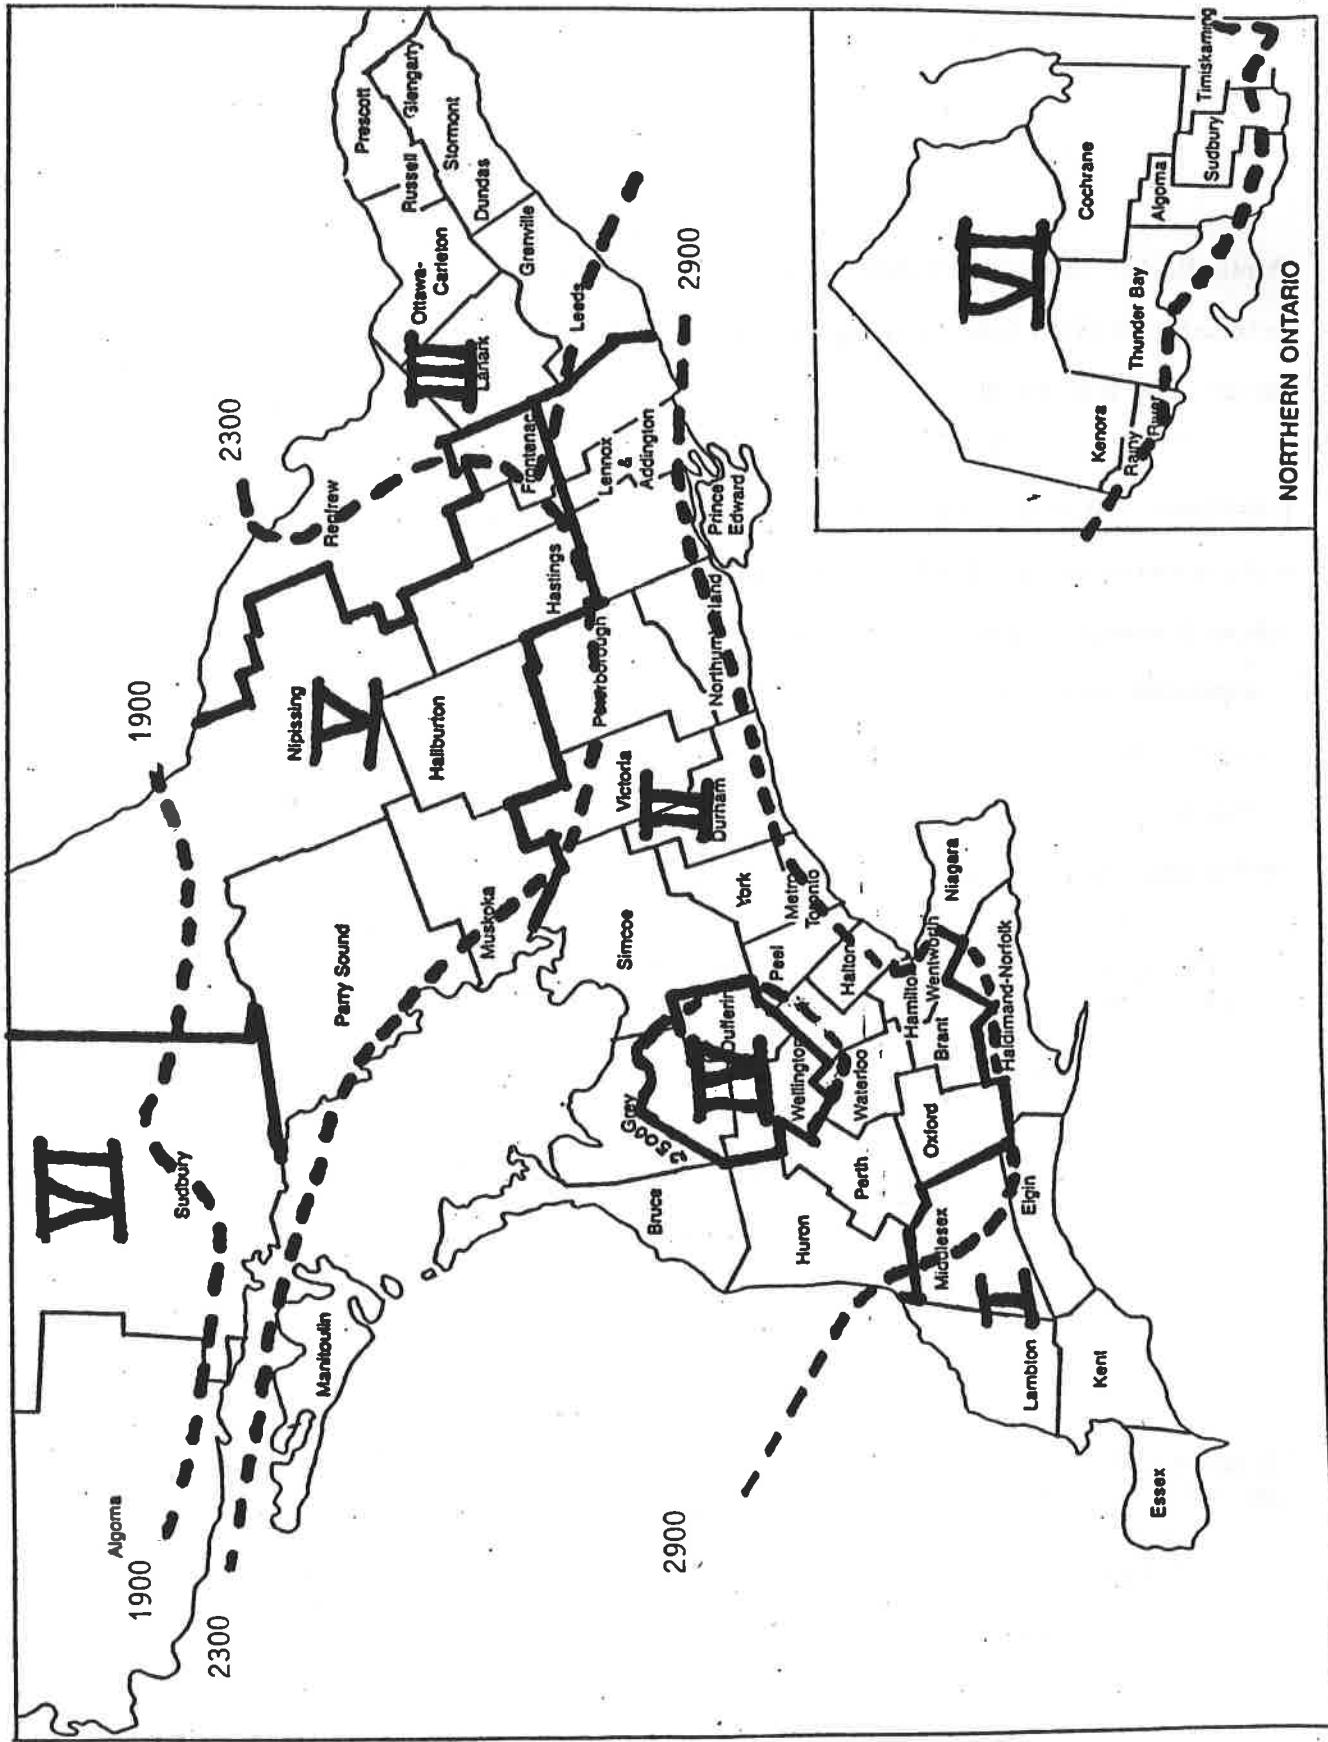

The testing areas for the Performance Testing program in Ontario are outlined by using the enclosed heat unit map as a guide.

	Winter	Spring	
Test Area	I		- Southwest of the 2900 heat unit lines.
Test Area	II	II & IV	- West of Frontenac, between the 2900 and 2300 heat unit lines and the Dundalk plain (Grey, Dufferin and Wellington) within the 2500 heat unit lines.
Test Area	III	III	- East of Frontenac, between the 2900 and 2300 heat unit lines.
Test Area	V	V & VI	- Northern Ontario below the 2300 heat unit lines.

The results of the 2003 tests and the average performance of cultivars over the past several years are published in this report. The long term averages of Performance Trials are reported to assist farmers in making variety selection decisions. This information is also available on the internet at:
